

PAR 30 IN A JEWELLERY SHOWROOM

When the customer knows what he wants and what his requirements are, this partly makes the life easier for a serious lighting company, who is supposed not to just sell lamps, but also provide his customer with optimal recommendations.

The owner of the showroom, Mr Sanjay was one of those sophisticated customers, who was very well aware what he had come for. His main requirement was illumination of his product shelf as brighter as possible.

However, it took us a while to find for him the right option, namely PAR30, Base: E26/27, 20 Watts, Colour: True White, Beam angle: 60 Degrees.

The few pictures in the next page clearly show not only the powerful brightness created by ALTLED™ powerful PAR30 lamps, but the coherent illumination all across the board, where the products are displayed.

Should you need more technical and commercial information, please do not hesitate to contact us at info@ultraecollc.com.

Brightness: 3.69K or 3690 LUX
At the distance of 1.30m from the lamps
